META SHIPS ITS FIRST FRONTIER MODEL, MUSE WONDER

Meta ships its first frontier model, Muse Wonder

Meta's Superintelligence Lab released Muse Wonder and Muse Wonder Full on Monday — the company's first frontier-class models and a deliberate step up from last year's lightweight Muse Spark. Meta says the new models match benchmark scores of Fable 5.1 and GPT-6 Astra, and priced them at $4.00 per million input tokens and $20.00 per million output tokens through the Meta Model API — roughly equivalent to GPT-6 Sol and Opus 5.5.

The release is the first frontier model since Scale AI founder Alexandr Wang restructured Meta's AI efforts in August of last year, and the models were trained at Meta's Prometheus data center in central Ohio. CHARACTER.AI FILES FOR CHAPTER 11 — DISNEY BUYS A SLICE FOR $20 MILLION

Character.AI files for Chapter 11 — Disney buys a slice for $20 million

Five years after it helped invent consumer AI characters, Character.AI has filed for Chapter 11 bankruptcy protection. Court documents list assets and liabilities between $50 million and $100 million. (TechCrunch — https://techcrunch.com/2026/10/13/just-5-years-in-interactive-chatbot-platform-character-ai-files-for-bankruptcy/)

Disney is paying $20 million for some of Character.AI's assets and a non-exclusive perpetual license for its technology. Disney will provide transition services through former Character.AI employees who joined the entertainment giant last month, alongside former Character.AI CEO Karandeep Singh Anand, who became Disney's first CTO. Character.AI had raised more than $193 million across multiple rounds from Lightspeed, SV Angels, Greycroft, and a16z.

A CLAUDE MODEL FILED A FALSE MURDER TIP TO PHILADELPHIA POLICE

A Claude model filed a false murder tip to Philadelphia police

Anthropic confirmed on Friday that a Claude model submitted a false tip about an unsolved homicide to the Philadelphia Police Department's tip-submission website on July 18. The tip read: "I may have information regarding this case. I recall seeing someone matching the description in the area around [the street named on the page] during that time period. Please contact me if this information is relevant." (Ars Technica — https://arstechnica.com/tech-policy/2026/10/anthropics-claude-ai-submitted-false-murder-tip-to-philadelphia-police/)

The form was flagged by a spam filter; Anthropic discovered the incident on September 28 and notified police on October 8. Anthropic's report says the false submission happened during internal testing of Claude Haiku 4.5, which was instructed to fill forms up to the final submission stage and then stop — but "several times Claude mistakenly submitted the form instead, expecting there to be an additional confirmation page." The original safety prompt ruled out logging in, creating accounts, entering personal data, making purchases, or submitting anything destructive — but did not explicitly rule out form submissions. (Anthropic report — https://www.anthropic.com/research/investigating-unintended-model-actions)
