

THE DAILY BRIEF

SEPTEMBER 11, 2026

MARKETS & FINANCE

Major market moves, prediction markets, and economic news

Stocks Slide as Bond Yields Jump; S&P; 500 Falls 0.58% to 7,591.70. Thursday's session handed the major indexes a second straight loss. The S&P; 500 closed at 7,591.70 (-0.58%), the Nasdaq Composite ended at 26,081.72 (-0.65%), and the Dow Jones Industrial Average slipped about 0.5% as a hotter-than-expected PPI print pushed the 10-year Treasury yield higher and reignited inflation anxiety ahead of today's CPI report. (WSJ, Yahoo Finance)

Bitcoin Slips Below \$77,000 as CPI Anxiety Builds; Crypto Market Cap Drops 4%. Bitcoin traded near \$77,081 on Friday morning, down roughly 2.2% from Thursday's open and about 5.8% below last week's levels — though still up 19.8% over the past month. The global crypto market cap fell to \$2.65 trillion, with the Fear & Greed Index cooling from 69 to 56. Bitcoin dominance climbed to 58.49%. Traders are watching whether the September 15 Clarity Act vote and today's CPI print reignite risk appetite or extend the pullback. (Yahoo Finance, AnalyticsInsight)

ESMA Declares Polymarket and Kalshi Lack EU Authorization, Questions Geo-Blocks. Europe's top securities regulator warned that both prediction-market giants lack the MiFID II clearance required to serve EU retail clients, and publicly questioned whether their partial geographic restrictions and VPN blocking actually work. France and Spain have already moved against the platforms at the national level. The warning lands as Kalshi pushes deeper into US derivatives: yesterday Kalshi launched gold and silver perpetual futures following CFTC approval, opening a new asset class on its CFTC-regulated exchange. (CoinDesk, CNBC)

Senate Republicans Unveil Revised Crypto Bill Ahead of Clarity Act Vote. A pivotal initial vote on the Clarity Act — the most consequential US crypto market-structure legislation in years — is scheduled for next week, and Senate Republicans released a revised text on Thursday ahead of the floor fight. India is moving on a parallel track: SEBI's Demat 2.0 pilot saw three issuers raise over \$100 million in tokenized corporate bonds settled via wholesale CBDC. (The Block)

Sam Bankman-Fried Petitions Supreme Court to Overturn Conviction and \$11B Forfeiture. SBF's lawyers argued to the Court that he was unfairly barred from presenting evidence showing FTX had sufficient assets to cover customer losses at the time of collapse — a long-shot appeal that nonetheless keeps the case in headlines. (The Block)

AI & TECH

Latest in artificial intelligence, models, and industry

Jensen Huang Tells Wall Street Nvidia Will Grow 70% Next Year — "Demand Is Much Greater." Speaking at the Goldman Sachs Communacopia + Technology conference on Thursday, Nvidia's CEO reiterated the company's rare two-year revenue forecast: 70% YoY growth in fiscal 2028 (ending January 2028), driven by the Vera Rubin platform ramp

and a 2-million-GPU order book from Amazon alone. At a projected \$396B base for fiscal 2027, that implies roughly \$673B in fiscal 2028 — enough to push Nvidia past Apple and Alphabet to become the #2 US tech company by revenue, trailing only Amazon. Huang flagged cybersecurity as the next major AI growth vector beyond physical AI and autonomous driving. (TechCrunch, Seeking Alpha)

OpenAI Puts Pro Subscriptions on Hold as "Astra" Demand Strains Compute. OpenAI paused new sign-ups for its \$200/month Pro tier, citing extraordinary load from its new Astra model. The freeze underscores the supply-constrained reality of frontier-model serving at scale. Hours later, OpenAI launched ChatGPT for Financial Services — a vertical product targeting the research, modeling, and pitchbook grunt work currently done by junior bankers on Wall Street. (TechCrunch, CNBC)

Anthropic Details Distillation Campaigns From Alibaba, Moonshot AI, and DeepSeek. In a new report released Thursday, Anthropic alleged persistent and escalating distillation attacks by three China-based AI labs, in which model outputs are systematically harvested to train competing systems. The disclosure lands as China's humanoid-robotics startup JoyIn separately raised eyebrows by publishing a new model with claimed overlaps to OpenAI research. (TechCrunch, CNBC)

Meta's AI Agent "Muse" Climbs to #2 US App, but Slower Than Threads. Meta's newest AI agent app is gaining traction, though its growth curve is more measured than the company's prior launches. Ant International, meanwhile, is partnering with Visa and Mastercard on common standards for AI-agent payments — including verification and transaction monitoring for autonomous purchasing agents. (TechCrunch, CNBC)

Proxima Fusion Commits €140M to Build a Fusion-Grade Superconducting Tape Factory. The Munich-based startup announced plans for a €140M (\$162.6M) facility to produce high-temperature superconducting (HTS) tape — a critical input for fusion reactors currently dominated by Asian suppliers. It's one of the largest single capital commitments in the private-fusion supply chain to date. (TechCrunch)

The Brief on Bots and Captchas. Anthropic published a separate study showing that rogue AI agents struggle with CAPTCHAs — but not in the obvious way. The interesting finding is which workaround strategies actually work, and which just waste cycles. (TechCrunch)

BRIEFLY

< **GameStop, Oracle, Adobe, RH** led Friday's premarket movers as Oracle's earnings reaction spilled into the open. (CNBC)

< **Adani Enterprises** shares jumped after its airport unit closed a \$1B fundraising deal at a 5.54% stake. (CNBC)

< **Bitwise** is shutting down its Dogecoin ETF (BWOW) less than a year after launch, citing chronically thin volumes since its November 2025 debut. (The Block)

< **Blockstream** publicly refused a ransom demand tied to the remaining 600 BTC from the Liquid sidechain exploit, while resuming Liquid transactions with peg-outs still disabled. (The Block)

THE TAKEAWAY

The single most important story for Kiran today is the collision between prediction-market regulation and prediction-market expansion. ESMA just drew a sharp line on Polymarket and Kalshi operating in Europe without MiFID II authorization, while Kalshi simultaneously launched gold and silver perpetuals in the US after CFTC approval. The two events together describe the next phase of the prediction-market industry: a regulated derivatives expansion in the US, and a regulatory wall in the EU. For Polymarket specifically — which is the venue Kiran trades — the EU restriction isn't a new threat, but it's a hardening one. Meanwhile, Nvidia's reiterated 70% growth guidance and OpenAI's banker-targeting ChatGPT for Financial Services launch both confirm the same thesis: AI infrastructure demand remains supply-constrained, and AI is now eating the highest-margin knowledge-work workflows on Wall Street. Bitcoin near \$77K with CPI on the calendar is the macro variable to watch into next week.
